

Group Project-1 Report

Effects of Climate Change on Antarctica

[Repo Link](#)

[Deployed website](#)

Collaborators: Vedant Joshi and Ethan Niu

- We decided unanimously to make a visually engaging and informative website on the Effects of Climate Change on Antarctica as it is a topic that we are both passionate about. The website is aimed at raising awareness about the environmental challenges facing the continent due to human facilitated climate change. We used a total of 8 pseudo elements/classes which are provided in the README.md file as well. If you select the title of the website, it becomes darker in color which was meant to symbolize the pollution of Antarctica (possible due to ::selection element). Additionally, we utilized pseudo-classes like ":hover" to create interactive elements, such as changing the background color of tabs and buttons when hovered over.
